*** Note:** Current production bucket and lift arm cylinders have end glands that thread into the main cylinder tube. Early style cylinders have glands that are held in place by an external wire ring. The parts listed above do not fit the early style cylinders. A seal kit (ASV PN: 0402-946) is the only repair item available for these early cylinders.

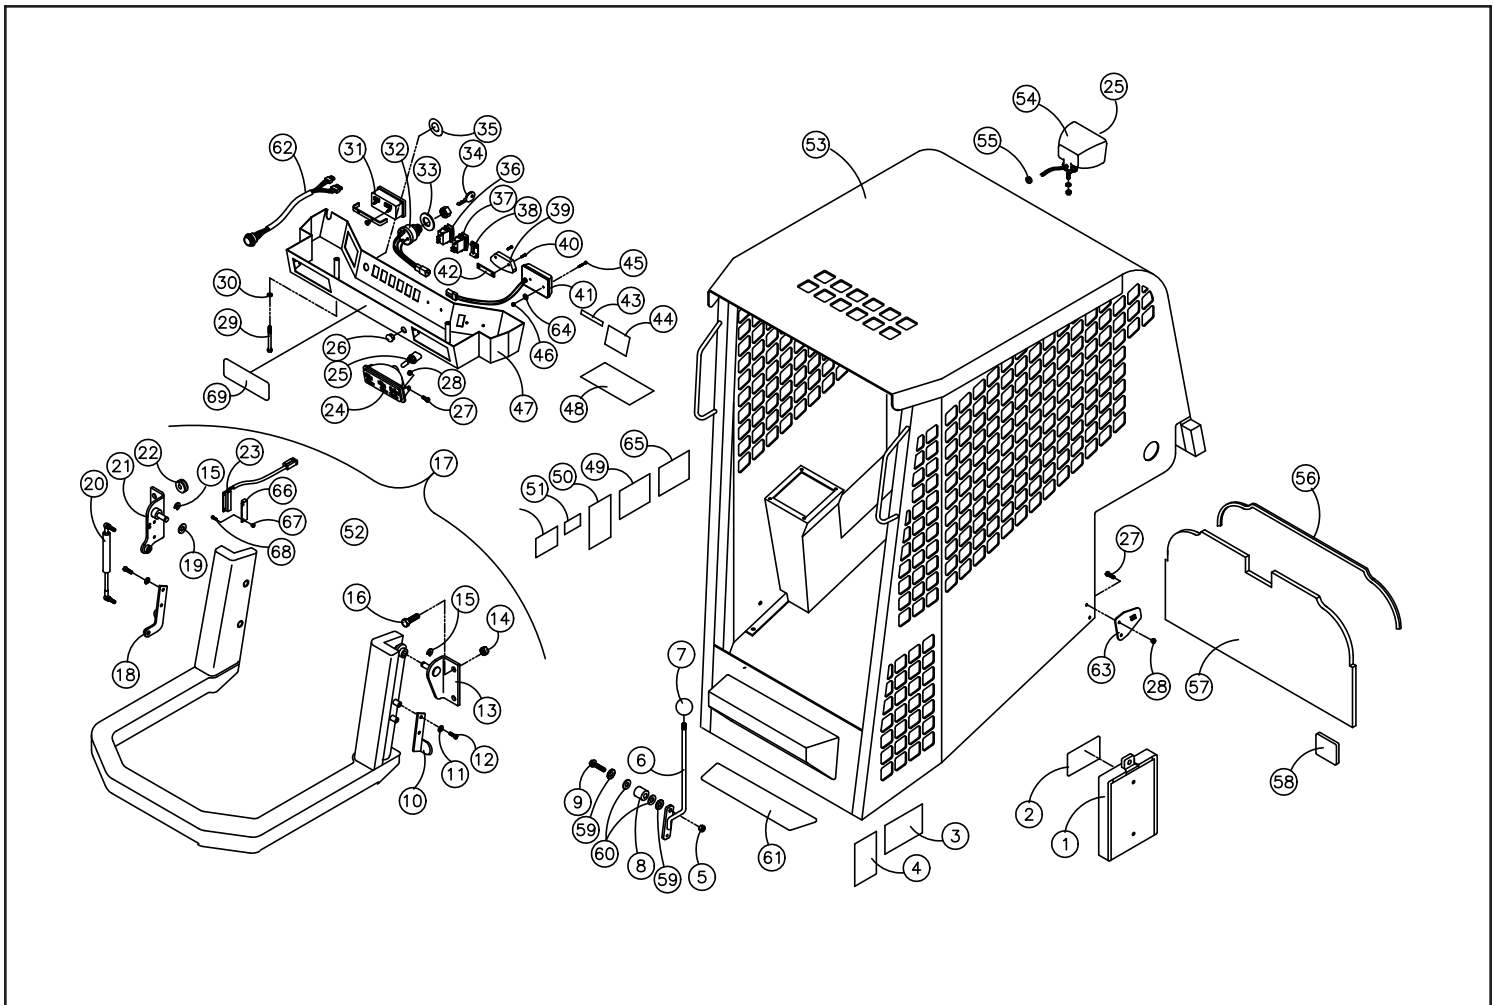

If more extensive repair is required on the early style cylinders, cylinder replacement will be necessary.

Lift-arm cylinder: ASV PN: 0304-349
Bucket/Tilt cylinder: ASV PN: 0304-350

This exploded view diagram illustrates the assembly of a mechanical component, likely a door latch or hinge. The main assembly consists of a base plate (1) with a central slot (15) and a mounting bracket (23). A long, thin plate (17) is positioned horizontally across the middle. A vertical plate (9) is attached to the right side. Various fasteners, including screws (2, 3, 4, 5, 6, 7, 8, 10, 11, 12, 13, 20, 21, 22), springs (3), and pins (18, 19), are shown in their respective positions relative to the main components. The diagram uses dashed lines to indicate the alignment and assembly path of the parts.
